WORK EXPERIENCE

XchangePlus - Backend Developer

April 2018-December 2019

- Started April 2018 as an Intern, offered full-time position in August 2018.
- Building web automation API using Selenium, hosted on AWS.
 - Automated real estate title orders and examinations towards Title Companies.
 - API subsequently forged a partnership with Alliance Title Corporation.
- Front end development on a user guide using bootstrap/javascript.
- REST API for data retrieval and pruning from Chicago Cityscape LLC.
- Fully fleshed out subscription system using Stripe API.
 - Built database and payment system schedule from scratch
- On web platform chat rooms using Node.js and AWS S3 for file storage.
 - Used AWS ec2 to host server.
 - Project also synced document files to user's file storing solution of choice.
- Automated file syncing to user's Dropbox/One Drive/ Google Drive.
 - Used Oauth2 to simultaneously protect user's files, but also make relevant changes,
- Deadline and real estate tax calculator as a platform tool.
- Consumer Portal development.
 - Goal was to make a user-friendly mobile version of the main platform.
 - Collaboration with outsourced front-end developer team on requirements.
 - Handled ticket requests via JIRA from front-end team.
 - Tickets ranged from bug fixes to implementation of main back-end functions.
 - Approach was to abstract and simplify the nuances of the main platform.
 - Built REST API for the front-end team using Laravel framework.
 - Documentation and functionality testing done via Postman.
- Realtime notification implementation to main platform.
 - Used Node.js socket.io library to give users relevant updates to their projects.
 - Built a REST API to handle async calls due to PHP limitations.
- Left Xchangeplus amicably, documenting all projects
 - Handled questions regarding former projects post exiting the company.
